

# Technical Data Deliveries using S1000D

**Product Code:** Theory\_D

**Price: \$591.00**

**Ex Tax: \$591.00**

## Short Description

This course focuses on the key aspects for packaging and delivering technical data using the S1000D Specification.

This training is aimed at Project Managers, Integrated Product Support Managers, Technical Data Managers responsible for Data Exchange.

## Description

This course provides a foundational understanding of the key considerations for delivering S1000D-compliant data. Participants will explore available delivery options, data presentation methods, and essential management processes to ensure efficient and effective content delivery. The training is ideal for professionals involved in technical publications, content management, and S1000D project implementation.

This training is aimed at Project Managers, Integrated Product Support Managers, Technical Data Managers responsible for Data Exchange.

Estimated Course Duration is 1 hour.

## Objectives

The topics in this course are:

- Understand and Explain Information Sets and Publications
- Identify and Describe Information Presentation and Use
- Understand and Describe Information Processing

- Identify and Describe Information Management - Comment

### **Why do I need to learn about S1000D?**

S1000D is a specification that has been designed specifically for technical publications for the aviation and defence industries. Although the specification has been developed for these industries, the use of S1000D in other industries is also true. How this specification can be used in any industry may be limited by your own imagination.

In this course you will be introduced to S1000D to start you on your journey of using S1000D. This course will not identify any specific software solution that could be considered for the project.

The course will look at the information provided in the 3500 pages of the S1000D specification and help you to understand what is involved to use S1000D for the project. You will start with the basic introduction to the specification and continue through to what types of publications you need to consider for the final deliver.

Many of the points that are included in the course may be incorporated into your organisation. The core difference is that we document the information for S1000D to formalise the information. mm

As stated, this is the start of your journey and TIM Consulting hope the help you through this process. Make sure that you have a copy of the S1000D Specification, if you don't already have this its available from the S1000D website under downloads.
